

Contract Packaging System implemented for implantable orthopaedic device

Overview

A medical device company had an innovative idea that they were looking to package for commercialisation. The device is an orthopaedic device designed for thumb implants.

Business Problem

The medical device company needed medical grade packaging developed and tested by a trusted medical device contractor. This medical device company needed to have the ability to design the packaging for the device and implement a complete packaging system.

Specific Goals

- Design of packaging for device
- Designed labels for all packaging
- Complete packaging system

Advant Solution

- Robust QMS
- Innovative packaging design
- Developed rigorous testing capabilities
- Complete packaging system developed

Advant's strong engineering support, robust quality management system and contract packaging expertise ensured that our customer's device complied with ISO and FDA regulations and could be shipped globally.
